

CLAIM

2. A fishing bobber device comprising: two half spheres of a buoyant medium, held together under force by a stretched elastic cord, or a loaded spring, or tension from spring steel, which are locked in place over a fishing line by a lever mechanism consisting of two thin hard plastic pieces attached to the bottom of the half spheres and extending out from the apex of said sphere at a 45 degree angle to the flat surface that when pushed together open half spheres apart for insertion of fishing line.
